SQL优化

测试目标

验证SQL优化的效果,了解索引对查询和数据插入的影响程度。

测试环境

1、jmeter模拟15个程序不停的执行SQL

```
select * from t_test where col_b = ?
```

其中"?"为测试工具产生的1-100万随机数字,以此作为查询条件执行SQL

2、Oracle中有一张表t_test, 预先插入了100万行记录,其中col_a是主键字段,内容为24位长的字符串;col_b是数值字段,内容为1到100万的随机数字(有重复值);col_c为100位长的随机字符串;col_d为当前日前500天内的随机日期,日期类型。

测试方法

- 1、运行压力测试程序,查看在没有索引的情况下,每秒能执行完成几次SQL
- 2、为col_b字段,创建索引
- 3、再次运行压力测试程序,查看在有索引的情况下,每秒能执行完成几次SQL
- 4、比较两次结果,验证SQL优化效果

oracle安装

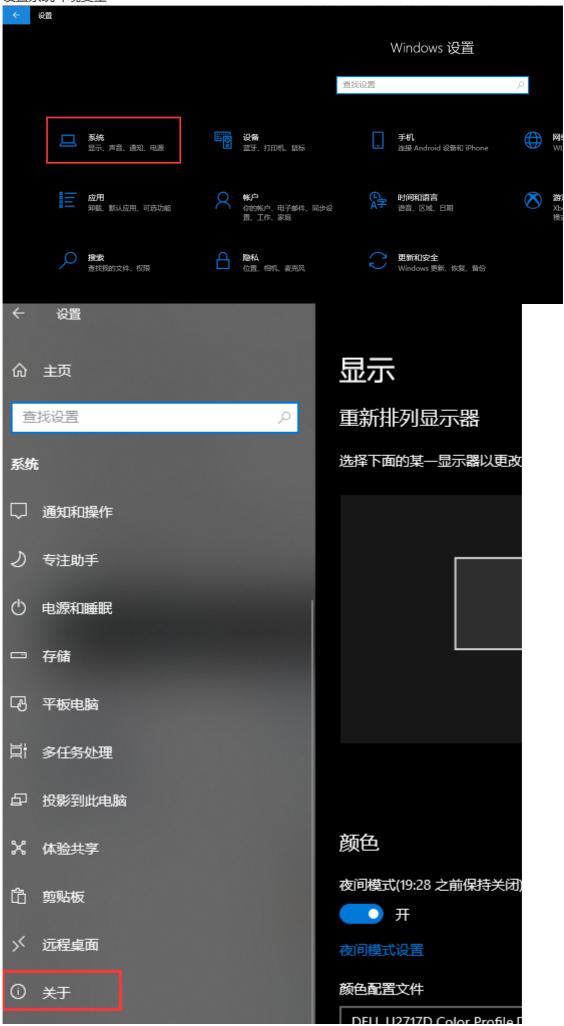

通过docker安装oracle-xe

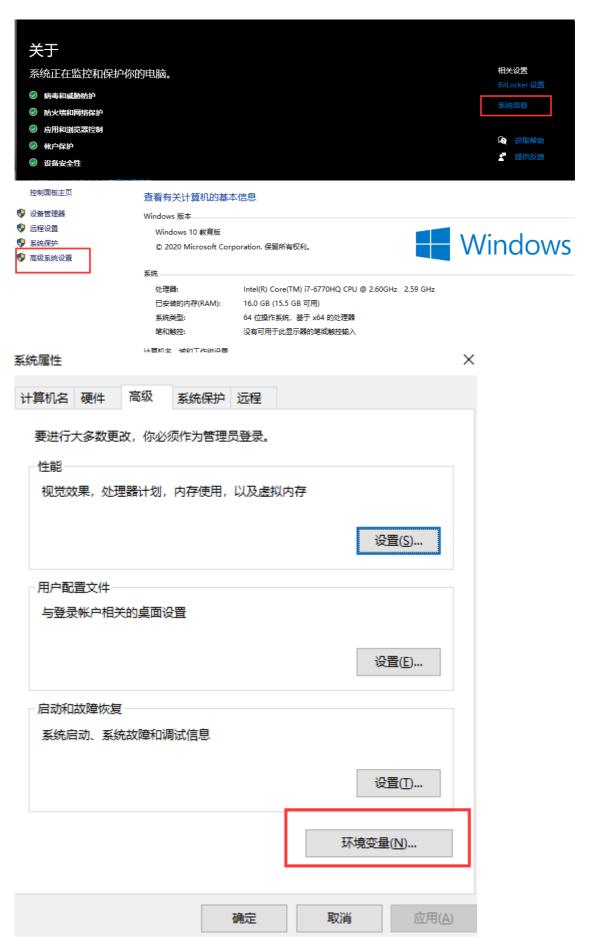

docker run -d --name oracle-xe -p 49161:1521 -e ORACLE_ALLOW_REMOTE=true oracleinanutshell/oracle-xe-11g

安装Oracle instant client

1. 从Oracle官方网站下载<u>Basic Package</u>和<u>SQL*Plus Package</u>,解压缩放到一个目录下(例如:c:\oracle_instant_client)。

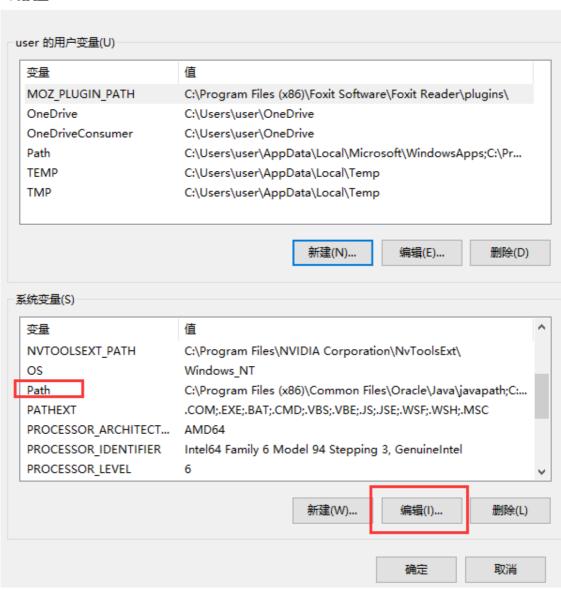

2. 设置系统环境变量

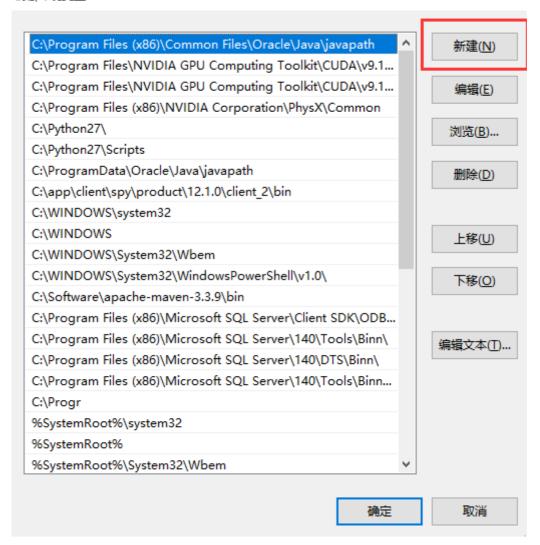

修改path环境变量,加入oracle instant client路径

环境变量

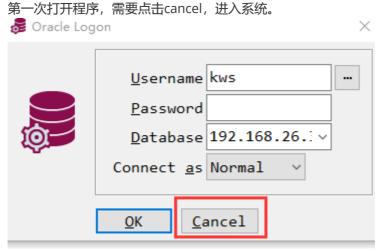

編輯环境变量

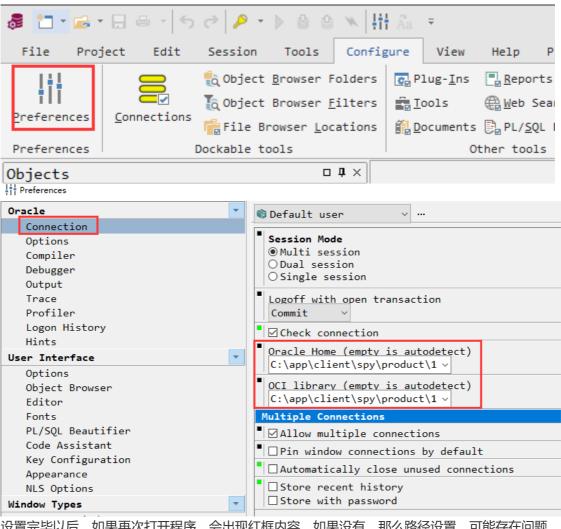

通过pl/sql developer连接到oracle-xe

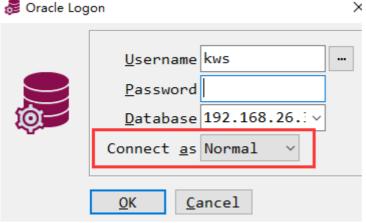

1. 设置oracle DLL文件路径

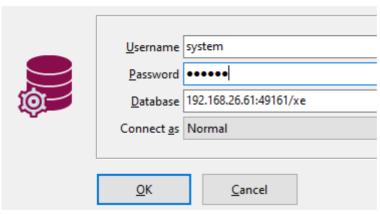

打开参数页

设置完毕以后,如果再次打开程序,会出现红框内容。如果没有,那么路径设置,可能存在问题。

2. 登录oracle xe 👼 Oracle Logon

username: system password: oracle

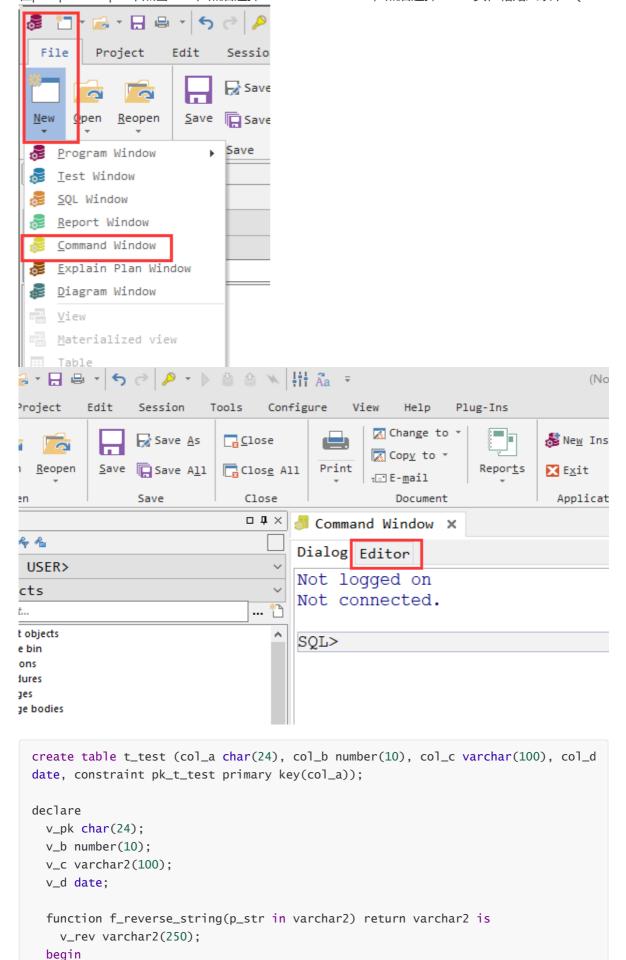

database: [ip]:49161/xe

这里的IP, 指的是wsl的IP地址。可以进入wsl, 通过执行命令获取

```
root@CHENZHEN-NUC:/home/spy/jmeter-docker/docker-jmeter/tests/trivial#
root@CHENZHEN-NUC:/home/spy/jmeter-docker/docker-jmeter/tests/trivial; ip a

```

搭建性能测试环境

在oracle中灌入测试数据

FOR i in reverse 1..length(p_str) LOOP
 v_rev := v_rev || substr(p_str, i, 1);

END LOOP;

```
return v_rev;
     end;
  begin
     for i in 1 .. 100 * 10000 loop
        v_pk := f_reverse_string(lpad(to_char(i), 24, '0'));
        v_b := trunc(dbms_random.value * 1000000);
        v_c := dbms_random.string('p', 100);
        v_d := trunc(sysdate) - trunc(dbms_random.value * 500);
        insert into t_test values (v_pk, v_b, v_c, v_d);
       if mod(i, 1000) = 0 then
          commit:
        end if;
     end loop;
     commit;
  end;
☐ ☐ Command Window 🗶
  Dialog Editor
  create table t_test (col_a char(24), col_b number(10), col_c varchar(100), col_d date, constraint pk_t_test primary key(col_a));
  declare
   v_pk char(24);
   v_b number(10);
   v_c varchar2(100);
v d date;
   function f_reverse_string(p_str in varchar2) return varchar2 is
   v rev varchar2(250);
     FOR i in reverse 1..length(p_str) LOOP
  v_rev := v_rev || substr(p_str, i, 1);
     END LOOP;
     return v rev;
    for i in 1 .. 100 * 10000 loop
     v_pk := f_reverse_string(lpad(to_char(i), 24, '0'));
     v_b := trunc(dbms_random.value * 1000000);
v_c := dbms_random.string('p', 100);
v_d := trunc(sysdate) - trunc(dbms_random.value * 500);
     insert into t_test values (v_pk, v_b, v_c, v_d);
     if mod(i, 1000) = 0 then
     end if;
   end loop:
   commit;
  end;
  1
然后点击执行按钮

语句, 生成测试数据
点击new --> SQL window, 打开一个SQL执行窗口, 输入以下SQL, 检查执行结果
```

select count(*) from t_test;

```
SQL Output Statistics

select count(*) from t_test;

select * from t_test;

Select t_test Select t_test

COUNT(*)

1 1000000
```

安装并配置jmeter

1. 下载jmeter

```
wget https://mirror.bit.edu.cn/apache//jmeter/binaries/apache-jmeter-5.3.tgz
tar -xvf apache-jmeter-5.3.tgz
sudo apt install openjdk-8-jdk unzip
```

这里运行apt时候,可能系统会提示你输入wsl的用户密码

2. 检测安装是否成功

```
cd apache-jmeter-5.3
./bin/jmeter -v
```

出现以下内容表示安装成功

3. 配置jmeter环境

```
cp ~/bjppt/files/ojdbc7.jar ~/apache-jmeter-5.3/lib/
mkdir ~/apache-jmeter-5.3/tests
cp ~/bjppt/files/test_plan.jmx ~/apache-jmeter-5.3/tests/
cp ~/bjppt/files/jmeter-jdbc-test.sh ~/apache-jmeter-5.3/
```

运行性能测试,验证SQL优化效果

运行第一次性能测试,持续3分钟后,中断测试,观察并记录结果

```
cd ~/apache-jmeter-5.3
./jmeter-jdbc-test.sh
```

```
che-jmeter-5.3$ ./jmeter-jdbc-test.sh

                                                                                                                                                                                                                                                                                                           34 Max:
                                                                                                                                                                                                                                                                                                                                                         2447 Err:
                                                                                                                                                                                                                                                                                                                                                                                                                               0 (0.00%)
```

图中,红色每隔30秒,会出现2行,带+的行表示30s内的测试结果,带+的行表示累计测试结果。黄色的内容为每秒执行的数量。

这里的图上内容表示:在00:00:30到00:00:59这段时间内,平均每秒有39.3条SQL执行完成,而从本次测试累计每秒有38.5个SQL执行完成

在oracle中,对表增加索引

在pl/sql developer中,新建sql window,然后执行以下SQL

```
create index idx_t_test_colb on t_test(col_b);
```

运行第二次性能测试,持续3分钟后,中断测试,观察并记录结果

```
cd ~/apache-jmeter-5.3
./jmeter-jdbc-test.sh
```

```
spy@CHENZHEN-NUC:~/apache-jmeter-5.3$ cd ~/apache-jmeter-5.3
spy@CHENZHEN-NUC:~/apache-jmeter-5.3$ ./jmeter-jdbc-test.sh
Creating summariser <summary>

Waiting for possible Shutdown/StopTestNow/HeapDump/ThreadDump message on port 4445
summary + 110128 in 00:00:20 = 5502.3/s Avg: 2 Min: 0 Max: 744 Err: 0 (0.00%) Active: 15 Started: 15 Finished: 0
summary + 202272 in 00:00:30 = 6742.4/s Avg: 2 Min: 0 Max: 51 Err: 0 (0.00%) Active: 15 Started: 15 Finished: 0
summary + 312400 in 00:00:50 = 62466.1/s Avg: 2 Min: 0 Max: 744 Err: 0 (0.00%)
summary + 196049 in 00:00:30 = 6535.0/s Avg: 2 Min: 0 Max: 38 Err: 0 (0.00%) Active: 15 Started: 15 Finished: 0
```

这里测试结果,可以看到每秒有6000左右的SQL执行完成。

测试结论

可以看到,数据库在增加索引前后的SQL查询性能差别巨大,从40增加到6000,大约提升150倍。
